MongoDB / NoSQL data model — generated from Moon Modeler ER diagram

This document describes the collections (entities) in the data model, their fields, data types, nullability, and key relationships between collections. **NN** = Not Null (required field). A key icon / **Key** marking indicates the field is part of the collection's key or is used to reference another collection.

Collections in this model:

members, products, orders, orderItems, views, likes, follows, boardArticles, sessions

members

Field	Type	Required	Key / Reference
_id	objectId	Yes	Key
memberType	enum	Yes	
memberStatus	enum	Yes	
memberNick	string	Yes	
memberPhone	string	Yes	
memberPassword	string	Yes	
memberImage	string	No	
memberPoints	int	Yes	
memberAddress	string	No	
memberDesc	string	No	
createdAt	date	Yes	
updatedAt	date	Yes	

products

Field	Type	Required	Key / Reference
_id	objectId	Yes	Key
productStatus	enum	Yes	
ProductName	string	Yes	
productPrice	double	Yes	
productLeftCount	int	Yes	
productSize	enum	Yes	
productVolume	enum	Yes	
productDesc	string	Yes	
productImages	array	Yes	
productViews	int	Yes	
createdAt	date	Yes	
updatedAt	date	Yes	

orders

Field	Type	Required	Key / Reference
_id	objectId	Yes	Key
orderTotal	double	Yes	
orderDelivery	double	Yes	
orderStatus	enum	Yes	
memberId	objectId	Yes	Key
createdAt	date	Yes	
updatedAt	date	Yes	

orderItems

Field	Type	Required	Key / Reference
_id	objectId	Yes	Key
itemQuantity	int	Yes	
itemPrice	double	Yes	
orderId	objectId	Yes	Key
products	objectId	Yes	Key
createdAt	date	Yes	
updatedAt	date	Yes	

views

Field	Type	Required	Key / Reference
_id	objectId	Yes	Key
viewGroup	enum	Yes	
viewRefId	objectId	Yes	Key
memberId	objectId	Yes	Key
createdAt	date	Yes	
updatedAt	date	Yes	

likes

Field	Type	Required	Key / Reference
_id	objectId	Yes	Key
likeGroup	enum	Yes	
likeRefId	objectId	Yes	Key
memberId	objectId	Yes	Key
createdAt	date	Yes	
updatedAt	date	Yes	

follows

Field	Type	Required	Key / Reference
_id	objectId	Yes	Key
followId	objectId	Yes	Key
subscriberId	objectId	Yes	Key
createdAt	date	Yes	
updatedAt	date	Yes	

boardArticles

Field	Type	Required	Key / Reference
_id	objectId	Yes	Key
articleCategory	enum	Yes	
articleStatus	enum	Yes	
articleTitle	string	Yes	
articleContent	string	Yes	
articleImages	array	Yes	
articleViews	int	Yes	
articleLikes	int	Yes	
memberId	objectId	Yes	Key

createdAt	date	Yes	
updatedAt	date	Yes	

sessions			
Field	Type	Required	Key / Reference
_id	objectId	Yes	Key
expires	date	Yes	
session{}	object	Yes	

Relationships Between Collections

From	To	Via Field	Description
members	orders	memberId	One member can place many orders.
orders	orderItems	orderId	One order contains many order items.
products	orderItems	products	One product can appear in many order items.
members	views	memberId	One member can create many view records.
members	likes	memberId	One member can create many likes.
members	boardArticles	memberId	One member can author many board articles.
members	follows	followId / subscriberId	Members follow / subscribe to each other.
views	products / boardArticles	viewRefId	A view record references a product or article.
likes	products / boardArticles	likeRefId	A like record references a product or article.
